WinSoft “Build to Print” Services

Whether you need a single system or 100 identical systems or products, WinSoft has the engineering and production expertise, advanced facilities, proven processes, and ISO 9001:2008 quality management system to deliver the highest quality products and services to you. All of our products are developed, manufactured and assembled in the USA.

Our “Build-to-Print” division manufactures systems, sub-assemblies, cables and wiring harnesses according to customer specifications. Typically, WinSoft customers provide data and drawings that we use to fabricate the system or an item of equipment based on their requirements. The design specifications often include performance and quality requirements that the systems or products must meet.

Our engineering, production and quality processes enable us to service the demanding aerospace, military and commercial markets. Furthermore, WinSoft system, software, hardware, mechanical and additional engineering capabilities help us to solve production and test problems in less time than our customers would need to solve these problems on their own. Moreover, in many cases during or after manufacturing the product or system, our engineers recommend design improvements that lower production costs and shorten delivery schedules.

Our commitment to you and your customers’ success does not stop with delivery of our products and systems. Our dedicated customer support engineers will assist you or your customers with installation, training and maintenance of the systems. With our superior performance, WinSoft has developed long-standing service relationships with major aerospace, defense and commercial companies.

Benefits

- Accelerate your time to market and lower your business risks
- Focus on your core competencies instead of on production and testing
- Utilize our skilled staff of electrical, software and mechanical engineers
- Reduce the rising cost of overhead, manufacturing and logistic services
- Access our expertise and experience with manufacturing and test technologies
- Communicate with our single point of contact for the duration of the program
- Obtain onsite installation, on-schedule delivery and top quality support
- Achieve the flexibility to scale systems up or down to meet demand
- Minimize or eliminate your procurement of many parts and materials
- Trust our 20 year delivery record of over 1,000 products and systems
- Leverage our National Instruments technology partnerships

WinSoft "Build-to-Print" Solutions

- Rack and Stack automated test stations
- Rack and Stack data acquisition systems
- RF and microwave test systems and subassemblies
- Desk-top test systems and instruments
- Cables, harnesses, PCB assemblies and sub-assemblies
- Switch system matrix and panels
- Interface Test Adapters (ITAs) and fixtures
- Miscellaneous hardware and test boxes
- Turn-key products and systems
- Product prototypes
- Metal Fabrication (2D/3D), engraving and silk screen

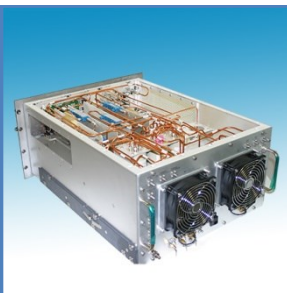

WinSoft "Build to Print" Examples

Automatic Test Station

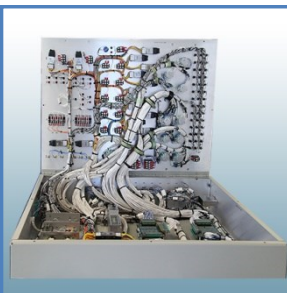

Load Simulators

RF Assembly

Card Test Fixture

Switching Sub-Assembly

Military Grade Cables

Customer Testimonial

"I would like to compliment you and WinSoft for the quality engineering and integration on the Boeing Satellite Systems ASIC verification system. Since taking delivery in January, this turnkey system has been instrumental to monitoring our assembly process and improving our module yields."

The ASIC Verification System has exceeded all our expectations and I look forward to working with WinSoft in the future."

- Boeing Satellite Systems

About WinSoft

Founded in 1994, WinSoft is a technology company that offers engineering services (software and hardware development) and turn-key solutions in the test and measurement field. In addition, our Build-to-Print division manufactures systems, products, equipment and sub-assemblies according to customers' specifications and ANSI/IPC-A-610 standards.

WinSoft has the engineering and production expertise, advanced facilities, proven processes and ISO 9001/2008 quality management system to service the demanding aerospace, defense and commercial markets. All of our products are developed, manufactured and assembled in the USA.
